

What do you need from your ICT storage?

Offices and classrooms across the world are increasingly dependent on technology like tablets, netbooks and laptops in their day-to-day work. But where do they keep it all?

If you're searching for a way to keep your tech safe there are plenty of storage solutions out there, but it's important you choose the right one for you. The best storage solutions should always be...

 <h3>Strong</h3> <p>Your ICT storage could be holding anything from 16 tablets to 32 laptops, and that's a pretty big load to bear. Reinforced frames and extra-strong castors spread the weight of your devices and ensure storage won't collapse under the strain.</p>	 <h3>Safe & secure</h3> <p>Your storage should keep your technology secure, so a lockable, safety-tested unit is essential. Look out for concealed door releases, which protect devices from children, and detachable IEC power cables that will help prevent any nasty trips.</p>	 <h3>Practical</h3> <p>Storage should fit into a busy environment. Removable baskets make it easier to get to your devices, and cable management systems are a must if you want to avoid straggly cable spaghetti. Look out for rounded corners and shock-absorbing bumpers to keep walls (and your team) safe.</p>
 <h3>Programmable</h3> <p>Programmable charging technology will let you set charging schedules in advance. That means your unit will boot up and charge your devices automatically, saving you the trouble of remembering. Look out for simultaneous charging, too, which will charge all your devices together.</p>	 <h3>Mobile</h3> <p>It's likely that you'll eventually want to move your storage to a different part of the office. If it's huge and immobile you might find yourself a little stuck, so look for durable castors and compact design. If you need to use devices on the move then there are even portable options you can choose from.</p>	 <h3>Universal</h3> <p>Make sure your technology will be compatible with your storage by finding a solution that uses USB charging ports. USB charging is universal, so whether your devices are years old or hot off the market, you'll still be able to plug in and charge. In other words, you'll be future-proof.</p>
 <h3>Ready to go</h3> <p>No one wants to spend hours assembling something; it's always better if it arrives ready to go. Be sure to check your chosen storage solution arrives fully assembled with easy to follow instructions, or you might find delivery more frustrating than exciting.</p>	 <h3>Protected</h3> <p>And this time, we don't mean in terms of durability. You want to feel reassured that, should anything go wrong with your storage, you'll be covered. Make sure the product has at least a year's warranty – two years' warranty would be much better.</p>	 <h3>Delivered fast, worldwide</h3> <p>Not every company will be able to deliver anywhere in the world, and you might have to wait a while even if they do. Double-check the delivery options and speeds before your order, or you might not see it for some time.</p>

It's no coincidence that every LapCabby displays these useful features – and much more besides. Choose from the TabCabby, LapCabby Mini, LapCabby, DeskCabby and GoCabby (as well as a few other gadgets) to find the perfect storage solution for your space.
